

ADVANCED FOOT CARE ASSOCIATES

Advanced Foot Care Associates is a high volume, multi-doctor podiatry practice in Flushing, Queens. Gramercy IT has been serving Advanced Foot Care Associates' needs since day one, from network design and installation to daily maintenance, support, and backup.

Gramercy Information Technology began with a free, comprehensive site and needs analysis. We consulted with the management and staff to create a scalable IT infrastructure that would meet their current and future needs. And as Advanced Foot Care Associates has grown, Gramercy IT has stood beside them, keeping their computers running smoothly and delivering new equipment and capabilities just when they've needed them.

The Solution:

Advanced Foot Care Associates began with a single server environment, but over the years they've grown to require Server Virtualization, Integrated User Profile and Terminal Server technology, separate file, program, and accounting servers, and extensive secure backups of sensitive and memory intensive health records and digital images. Over the years we've implemented systems that have allowed Advanced Foot Care Associates to streamline scheduling and billing operations and to convert what was once file storage to revenue generating space.

What Advanced Foot Care Associates had to say about us:

Gramercy IT's technicians have supported us in our computer needs since day one. They've been there for us for everything from new servers and workstations to routine software updates, and partnering with them from the start has definitely paid off. Gramercy designed and installed the network that we needed, and now they keep all of our computers running the way they should. They handle all of our data and system backups for us, too. They save us time and money and the stress of dealing with computer issues on a day-to-day basis. I highly recommend Gramercy IT for all of your computing needs.
